Dear Chuang-Chieh,

This is Chung-Shou with IE, NTHU. Hope you are safe during the COVID-19 pandemic.

Several friends, including Po-An, and I plan to organize a 2-day "online" summer camp/school to increase the international reputation of our algorithms and operations research society in Taiwan. It is similar to some recent short-term summer schools in Europe (and also a bit similar to Theory Day Taiwan at the link: <https://theoryday.github.io/>). This is one example of the summer schools for your reference: <https://for2083.mathematik.uni-kl.de/en/events/summerschool>

According to Po-An's recommendation, it would be great and our honor if you could give an online talk (about one hour) and share your recent research in this summer workshop/school. The topics center around algorithms and operations research, from game theory, math programming, to even machine learning. So far we plan to schedule the 2-day event in late August (on 8/19, 20 or 8/20, 21). Of course your suggestions and feedback would also be very appreciated.

Note that the summer workshop/school will be held in a virtual way (via Airmeeet), even the COVID-19 situation is getting better.

Best,
Shou
